ZEIN SAID

Dubai, UAE | +971 56 254 0825 (UAE) | +357 94 333 154 (CY) | Zein_Said@outlook.com
zeinsaid.github.io | linkedin.com/in/zeinsaid | github.com/zeinsaid | UAE Golden Visa holder

SUMMARY

Computer Science (AI) graduate with two years shipping AI systems for enterprise and government clients in the UAE, including a multi-agent LLM assistant for a Dubai government leadership institute, plus published research in conversational AI and a live AI receptionist demo with a 130-case model evaluation (zeinsaid.github.io). Strongest in designing and shipping LLM systems: agent architecture, integration and evaluation. Also founded and ran a business, so used to scoping with non-technical stakeholders and owning delivery.

EXPERIENCE

AI Engineer (Contract) | AttendNow / Datamind, Dubai — *Jun – Jul 2026*

- Reworked the video ingestion pipeline of a camera-based face-recognition attendance platform, replacing fixed-interval screenshot sampling with full-video processing and selective frame capture.
- Benchmarked image encoding formats and compression methods for frames retained in cloud storage, optimising for size against recognition-usable quality.

Co-Founder & Operations Lead | The Plug Business Center, Nicosia, Cyprus — *Aug 2025 – Present*

- Founded and ran a multi-service retail business next to the University of Nicosia; registered and structured as a Cyprus foreign-interest company.
- Selected, deployed and administered the POS and back-office software stack, and built the digital workflows for inventory, orders and accounting; now oversee operations remotely.
- Built an AI receptionist for the shop's customer messages (see Projects).

AI Engineer | IT Max Global, Dubai — *Jan 2024 – Aug 2025*

- Built MBRCLD AI, a multi-agent chatbot over the leadership database of the Mohammed bin Rashid Centre for Leadership Development, as one of a two-person team — owned the frontend end to end and worked across backend and model integration.
- Architected the system as a router agent dispatching to specialised agents: natural-language-to-SQL search, analytics across the user base, live web search, and a scope-enforcement agent validating every response before it reached the user.
- Became the company's flagship AI project, presented as the reference case in client and internal AI briefings.
- Delivered further AI solutions on OpenAI GPT and Microsoft Copilot for enterprise and government clients; scoped requirements directly with clients and ran internal workshops on AI adoption.

PROJECTS & PUBLICATIONS

Shop Assistant: AI receptionist for small businesses | github.com/zeinsaid/Shop-Assistant — *Sep – Oct 2026 · Live demo*

- Designed and built an LLM receptionist for The Plug, my Nicosia print shop: every message gets exactly one action (answer, ask the owner, hand off to staff, or stay silent), and code turns any answer not backed by the knowledge base into a question for the owner.
- Built a 130-case evaluation set (typos, Greek/Greeklish, prompt tricks, multi-turn chats) and used it to compare Anthropic, OpenAI and Google models behind one interface. Chose GPT-6 Luna: 125–127/130 passing at about $0.0003 per message.
- Shipped a public web demo (FastAPI API and static chat page) with rate limiting and a "why this reply" panel; 120 pytest tests and 32 design decisions documented with their reasoning.

"Detecting Agreement in Multi-party Conversational AI" | IEEE RO-MAN 2023, GROUND workshop — *Published 2023*

- Co-built a multi-party conversational agent using Rasa, PyTorch, Google Speech Services and OpenAI GPT; co-authored the paper and presented it remotely at the workshop, held in South Korea.

Driver drowsiness detection from facial scans | BSc dissertation, Heriot-Watt University — *Sep 2022 – May 2023*

- Trained a PyTorch deep neural network to classify driver drowsiness from facial imagery; analysis in scikit-learn and pandas.

EDUCATION

BSc (Hons) Computer Science (Artificial Intelligence), First Class | Heriot-Watt University, Edinburgh, UK — *2020 – 2023*

- Admitted directly into second year, completing the degree in three years; two Deputy Principal's Awards for Academic Achievement.

TECHNICAL SKILLS

Languages & frameworks: Python, JavaScript, SQL, Java, C, React, Node.js, Flask, Django, FastAPI, Pydantic, pytest, REST APIs
AI & ML: OpenAI, Anthropic Claude & Google Gemini APIs, Microsoft Copilot, multi-agent design, LLM evaluation, prompt engineering, Rasa, PyTorch, TensorFlow, scikit-learn, pandas
Tools & platforms: Git, Azure, Render, GitHub Pages, Claude Code and AI-assisted development

CERTIFICATIONS & ADDITIONAL

Certifications (2024): Azure AI Fundamentals (AI-900), Azure Data Fundamentals (DP-900), IBM Full Stack Development
Languages: Arabic (native), English (fluent), Greek (elementary, in progress)
Other: Valid UAE driver's licence · Open to relocation
